

Dear Customer,

At **MSC**, we aim to help you calculate emissions for ocean freight shipments. Our **New MSC Carbon Calculator** is based on data gathered by our Fleet Energy Efficiency Team, such as vessel type and fuel consumptions, to estimate emissions for ocean voyages. Data calculation is regularly revised on a monthly basis to ensure its accuracy with the most recent information.

Introducing Game-Changing New Features

Estimation of all Greenhouse Gases (GHG) and Emissions (CO₂e)

Multiple ports pairs can be selected for longer journeys.

Map overview with specific segments of the journey.
